Whether it's high-performance athleticwear, lifestyle, fashion, undergarments, outerwear, socks, seamless or even bedding, **drirelease**®, **DRICOMFORT**® GEO and **OPTIMER**® FRESHGUARD® are with you as you move through your day.

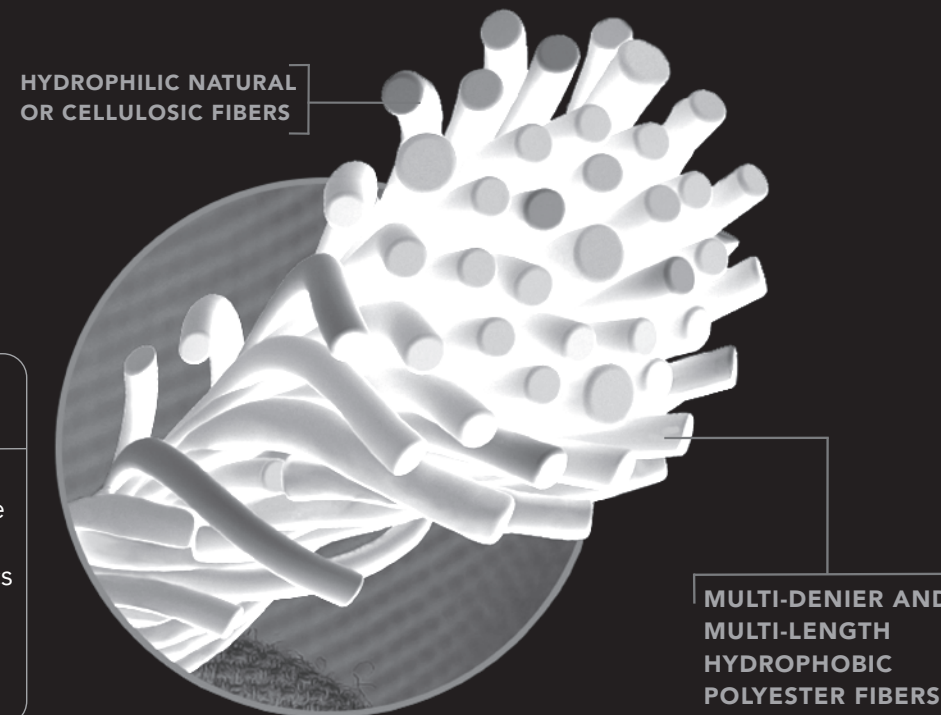

For more than two decades, technologies made by Optimer Brands have been an inherent part of surging, connected lifestyle that's changed how we dress as we engage with our lives - play, travel, work, or just relaxing.

Pioneer in performance and comfort textile solutions, our technologies are trusted by the best brands in the world helping users to move more comfortably - by wicking, drying fast, cooling, and freshening - as they pursue their passions. Hundreds of the world's most respected brands utilize **drirelease**®, **DRICOMFORT**® GEO and **OPTIMER**® FRESHGUARD® technologies.

As a company, Optimer Brands is built on a foundation of scientific inquiry, research, and innovation in textile technologies with global supplier network to ensure the production, quality and availability of them.

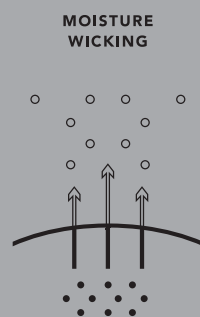

We are your textiles solution provider.

INHERENT ECO-FRIENDLY BLEND

drirelease® technology is not a surface application. Performance properties are built into each thread of our fabrics with a engineered blend of 85-90% hydrophobic to 10-15% hydrophilic fibers without chemicals of any kind.

MOISTURE WICKING
All **drirelease** fabrics utilize hydrophobic and hydrophilic fibers to pull moisture away from the skin — fast.

FAST DRYING
In test after test, **drirelease** fabrics reach one of the industry's highest standards for dryness — up to four times faster than cotton.

PERMANENT PERFORMANCE
With no chemicals or irritants to wash out over time, **drirelease** ensures eco-friendly, long-term fabric performance.

SUPERIOR COMFORT
Our fabrics' soft, natural feel keep wearers dry and comfortable — regulating body temperature by keeping skin up to 7°F cooler.

PREMIUM QUALITY
Our wide array of fabrics and knits exhibit excellent hand, hold their shape, and are easy care. They resist pilling, wrinkling and static cling.

drirelease
HEAT

warmth without
the weight

drirelease® HEAT provides higher thermal protection due to the micro-denier acrylic (hygroscopic and heat-generating) engineered blend with Wool or Lyocell fibers. By pulling the sweat and vapor away from the skin and first layer, HEAT helps the body to thermoregulate. With a super soft feel and pilling resistance, **drirelease**® HEAT is ideal for base-layers, mid-layers, sweaters, headwear, socks and much more.

MICRO DENIER ACRYLIC FIBERS
for bulk and warmth

WOOL OR LYOCELL FIBERS
wick sweat away

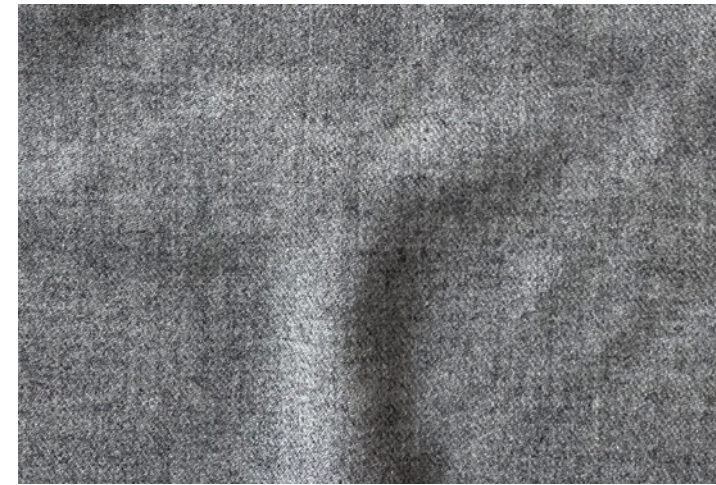

drirelease HEAT was designed to keep you warm, dry, and comfortable all day, every day. It is permanent and will not wash out, because it is not a surface application. Fabrics made with **drirelease HEAT** technology generate 1.6°C heat when tested according to ISO 18782 method - Determination of Dynamic Hygroscopic Heat Generation.

THERMAL-
REGULATING

DRICOMFORT® GEO 365 fabrics are built for year-round comfort and performance. Designed with **permanent wicking** and **fast-drying** capabilities, they actively **regulate body temperature** by pulling moisture and heat away from the skin. Infused with hydrophilic (water absorbing) and conductive (able to carry out water and heat) minerals - not coated with chemical finishes -, these fabrics use the body's own energy to speed up sweat evaporation, boosting natural cooling. Because the minerals are embedded into the fabric during the dyeing process, they become part of the fiber itself—meaning the performance won't wash

DRICOMFORT® LOFT is a range of performance fleece taken to the next level. In a market where performance has been defined only by stretch and warmth, LOFT brings enhanced comfort to fleece with the addition of moisture management. Thermoregulation provided by the efficient transportation of sweat gives DRICOMFORT LOFT fleece peak performance with less weight and through a broader range of activity.

Our research shows that the wicking performance of layering pieces is just as important for comfort as the base layer. In fact, LOFT enhances the release of moisture by the first layer, moving sweat and vapor through to the fleece surface where the moisture evaporates. This wicking through layers creates a system for maximum comfort. Combine DRICOMFORT LOFT with DRICOMFORT® GEO 365 or *drirelease*® base layer for the ultimate layering system.
